

DuPont Sustainable Solutions (DSS) Analytics

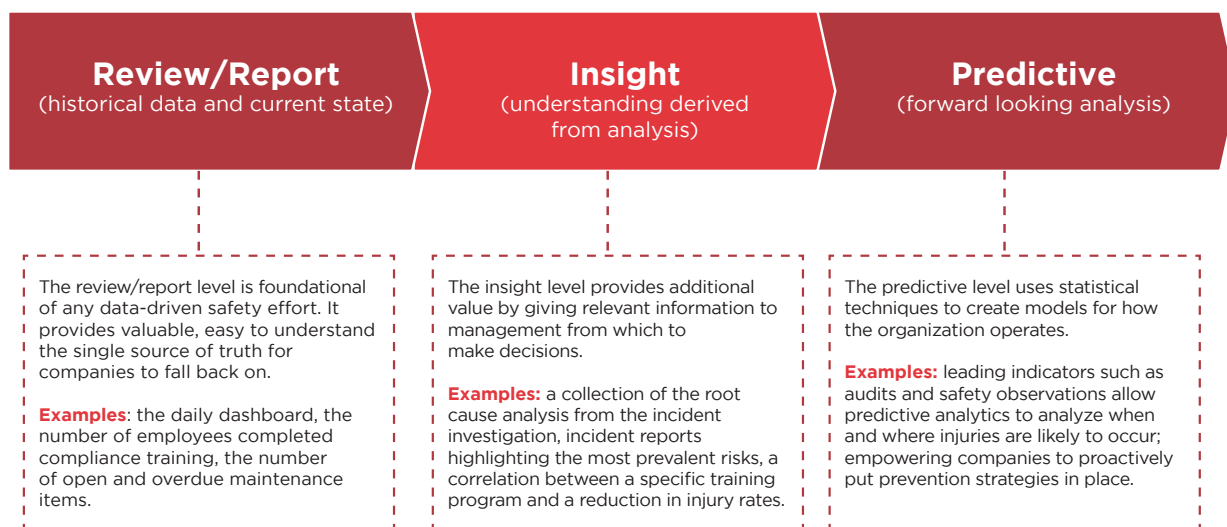

**DuPont
Sustainable
Solutions**

An excellent safety record can be a competitive differentiator; it drives better business performance through productivity, reduced risk, organizational focus, and workforce engagement. With these benefits in mind, improving workplace safety continues to be a priority for many leaders across industries.

Despite the investments, and procedural and behavioral reinforcement measures, many companies have not seen an improvement in their safety performance and continue to experience workplace incidents. To escape the safety performance plateau and continue the journey towards achieving safety excellence, one solution might be to leverage safety data and analytics to gain actionable insights.

Take actionable insights to improve safety outcomes

Many businesses are already collecting and analyzing large amounts of safety and operations data, though only a few really make actionable decisions based on their insights. In order to derive the maximum benefit from safety and operations data, one does not need to immediately jump to advanced statistical techniques. We believe that data analytics includes three different levels of sophistication: **review/report, insight and predictive.**

DSS Analytics

To continue the journey towards achieving safety excellence, leaders should consider these fundamental questions:

1. How can we use and maximize data analytics to prepare our organization to lead a safer, healthier and productive workplace?
2. How good is our reporting system in providing easy to understand information to our internal stakeholders (board of directors, executives, employees) for a better decision-making process?
3. How can we encourage and make sure our people have the mindset to use data insights in their day to day work?
4. How can we build value for data and analytics in the culture of our organization?
5. How can we leverage insights from the data we collect to decide on priority actions and drive better safety outcomes?
6. Are our information and data management systems providing the elements we need to generate the right insights?
7. Do we have the right people and capability to drive and implement data and analytics initiatives across our operations?
8. How can leaders in our organization lead the way in building and sustaining a data and analytics driven culture?
9. Are we able to benchmark our performance with peers in our industry and leverage available best practices?

The data becomes a management tool that allows constant focus, vigilance and guidance for making sound and supported business decisions for improvement. The insights gained help improve the overall maturity of the safety culture, and eventually, the insights will develop the organizations' capability to self-sustain its gains.

How can DSS help you protect your people and business?

At DSS, safety is one of our core values. Even after more than 200 years, safety is still the first thing we think about. It is deeply integrated into our culture and we understand that good safety is also good business.

We take a collaborative approach to helping you protect, extract and create value for your people and business. Our expertise is based upon DSS's real-world experience with a balanced focus on both the cultural aspects and the technical elements of your business.

- We are innovative in our approach; together we can find new and more intelligent ways to solve complex problems.
- We are insightful; we have the ability to recognize patterns, connect the dots, step back and see answers through details, helping you convert insights into value.
- We possess deep expertise across core industries enabling us to push the boundaries beyond your imagination.
- We have more than 200 years of owner operator experience, providing you with unique knowledge and deep operational experience to take you to the next level.

About DuPont Sustainable Solutions (DSS) Analytics

DSS Analytics delivers innovative and insightful analytics solutions to help clients develop sound business decision making. The solutions developed will help clients to make actionable decisions to improve their operations, enhance their safety and environmental performance, manage the organizational risks, drive cultural change and achieve their strategic goals.

DSS Analytics comprises solutions that address clients' needs and unlock value in the areas of Operations Risk Management, Operational Excellence and Learning and Development.

About DuPont Sustainable Solutions

DuPont Sustainable Solutions (DSS) is a leading provider of operations management consulting services that enable organizations to protect their employees and assets, realize operational efficiencies, innovate more rapidly and build workforce capability. By leveraging its DuPont heritage, deep industry and business process expertise and diverse team of expert consultants, DSS helps clients turn operations management into a competitive advantage.
